

# Why Attend

Join us in Lisbon and online for ESPID 2023!

**ESPID 2023 will bring together the most prominent researchers, clinicians and thought leaders in the field of paediatric infectious diseases, public health and epidemiology, immunology, microbiology, and more, to fill in the gaps between these disciplines in a relaxed atmosphere.**

**Vaccines are a focus topic at the ESPID meeting. We will provide the latest science in the field, the hottest clinical trials and provide practical advice on:**

- Rationale behind vaccine recommendations**
- Contingencies encountered in everyday practice**
- How to address concerns about vaccines**

**But ESPID doesn't just deal with vaccines, we will bring you up to speed on all anti-microbials – antifungals, antibiotics, antivirals, antiparasitics and everything you need to succeed as a paediatrician, infectious disease specialist or emergency doctor.**

**Take the opportunity to meet the PID thought leaders at their lectures, hands-on workshops and joint symposia. Hear their findings, ask them questions, share your experience and get their invaluable feedback!**

**The leaders want you to introduce yourself to them, so do so.**

Spend time with colleagues from all over the world, to share experiences and exchange ideas for developing better practices in the field of PID.

Present your research and cases to other Paediatric Infectious Diseases specialists to get feedback, new ideas and recognition, and make a name for yourself in the field.

ESPID believes in being an open and friendly environment for all presenters.

Contribute to finding the underlying reasons behind diseases and developing more effective solutions, to save countless patients' lives.
